The Notices application then sorts the blurbs in numeric order (blurbs appear on the notice in numeric order) before creating the NoticeXML (below data). Each blurb number corresponds to a row on an SQL table that has the predefined XML stored by PTM (Paragraph Text Manager), which is the UI tool we use to create the blurbs. The NoticeXML is then used by the Notices application to generate a PDF file, and is stored as a column in SQL for displaying the notice on the Notice Browser Web application as a PDF.
