Lottery Ticket Dispensers

Questions and Answers

Q1. Regarding the Lottery Ticket Dispensers RFP, could you please clarify whether the estimated annual quantities are typically purchased in a single order or through multiple orders throughout the year?

If multiple orders are expected, could you provide the approximate order frequency and typical quantity per order for each item?

A1. Order frequency depends more on business needs than time but for an estimate 1-3 orders per year would be reasonable.

If we require multiple orders the frequency would not be consistent as the business needs fluctuate. I would generally try to avoid multiple small orders and order once or twice per year . A typical order would consist of 10-20 in-counter units 100-200 boxes of replacement glass and 100-200 D5s
